

Ventilated façade with metal lattice or fabric cladding

FOAMGLAS® slabs with cold adhesive PC® 56

Schematic drawing

System 2.1.1

- 1 Solid wall (concrete/brickwork)
- 2 Primer coat
- 3 Anchoring corbel
- 4 Mechanical fastening with anchors PC® F
- 5 FOAMGLAS® slabs, bonded with PC® 56
- 6 Coating PITTCOTE® 404 with reinforcing mesh PC® FABRIC 79P
- 7 Metal lattice or fabric cladding

FOAMGLAS® product properties

Waterproof – Resistant to vermin – High compressive strength –
Non-combustible – Impervious to water vapour – Dimensionally stable –
Acid resistant – Easily cut to shape – Ecological

Advantages of the FOAMGLAS® system

- **Quality:** Systems with high quality materials. Quality management by systematic site inspections and professional consulting.
- **Cost efficiency:** The high durability preserves maximum value and guarantees minimal maintenance costs.
- **Sustainability:** Optimum insulation and protection against moisture for generations.
- **Safety:** Compact, fully bonded insulation system preventing damages caused by damp either through condensate or water penetration. Cellular glass prevents fire spread, does not develop flaming droplets, nor fumes or toxic gases.
- **Functionality:** Insulation and vapour barrier in one single functional layer.

Recommendations for architects

- Normally used: FOAMGLAS® slabs T4+, size 450/600 mm.
- Insulation thickness to meet building regulations or project specific U-value requirements. Please also consult our product overview. It contains information on all our products, their field of application and their specific properties.
- **The flatness and the general conditions of the substrate are important criteria when using FOAMGLAS® (see TG1). Please contact our Technical Department to verify the criteria for the substrate.**
- **For a technically correct implementation, relevant standards and guidelines must be observed.**

Solutions for technical details and specification clauses on request. Further proposals and solutions are available any time from our technical consultants. **Updated: November 2010.** We explicitly reserve the right to change the technical specifications. The current values can be found on our website under: www.foamglas.co.uk/building/applications

Ventilated façade with metal lattice or fabric cladding

FOAMGLAS® slabs with cold adhesive PC® 56

System 2.1.1

Installation instructions

- Primer PC®EM or emulsion PC®56 diluted with 10 parts of water, applied with roller on the dust-free surface. Coverage $\sim 0.3 \text{ l/m}^2$. (1)
- Fix the anchoring corbels to the substrate. Type and number of corbels depending on the metal lattice or the fabric cladding, the substrate and the structural requirements.
- Apply the FOAMGLAS® slabs fully bonded to the substrate, with staggered and tight-butted joints filled with cold adhesive PC®56. Coverage $\sim 3.5\text{--}4.5 \text{ kg/m}^2$, dependent on the thickness of the insulation:
Apply cold adhesive PC®56 with a notched trowel (tooth size $\sim 8\text{--}10 \text{ mm}$) to one short and one long side of the FOAMGLAS® slab (in stacks). Apply cold adhesive to the entire surface of the slab and push diagonally into the open corner. Remove squeezed-out adhesive with a trowel when slightly hardened. (2/3/4)
- Mechanical fastening of the FOAMGLAS® slabs (during application) with anchors PC®F, consumption: 2 pieces/ m^2 . (5)
- Fixing aid and mechanical fastening of the FOAMGLAS® slabs in the base area and at lintels (e. g. support bracket).
- Remove irregularities of the insulation surface with a FOAMGLAS® slab or preferably with an emery board. Remove dust from the FOAMGLAS® surface.
- Allow waiting time of approx. 3–5 days (dependent on ambient temperature and atmospheric humidity).
- Seal the FOAMGLAS® penetrations with cold adhesive PC®56 or PITTSEAL®444.
- Apply a first layer of PITTCOTE®404 with a stainless steel trowel, coverage $\sim 1.0\text{--}1.5 \text{ kg/m}^2$. Embed reinforcing mesh PC®FABRIC 79P. Apply a second layer of PITTCOTE®404, coverage $1.5\text{--}2.0 \text{ kg/m}^2$. (6)
- Install the desired metal lattice or fabric mesh.

Recommendations for the contractor

- The build up and tolerances of the substrate must be in accordance with relevant standards and guidelines.
- Substrate and ambient temperature should not be below $+5^\circ \text{C}$.
- The joints of the top layer of the last course must be protected against driving rain in order to prevent water penetration or washing out of the cold adhesive.
- Protect sensitive components provided by other suppliers against blobs of adhesive.
- **Please contact our technical consultants; they can help you by providing support or on-site assistance free of charge.**

The technical guidelines for the application and the installation of FOAMGLAS® are based on historical experience and general site practice. They do not reflect individual examples. We therefore assume no liability as to the completeness and the suitability for a specific project. Furthermore, our liability and responsibility are subject to our general conditions of sale which are not extended either by this technical data sheet nor by the consulting of our technical sales representatives.
